

SILENCERCO GAS-DEFEATING CHARGING HANDLE

AC5062

 SILENCERCO

GAS-DEFEATING CHARGING HANDLE (GDCH)

The GDCH is the first charging handle designed to address the actual source of gas to the face while shooting short barreled and/or suppressed AR platform firearms. Our patented design creates a seal between the rear upper and lower receiver removing the direct path for gas to the shooter's face.

FEATURES

- Machined for Billet 7075 Aluminum
- Type III Hardcoat Anodized Finish
- Ambidextrous Design
- Limited Lifetime Warranty

CANCER P65WARNINGS.CA.GOV

GAS-DEFEATING CHARGING HANDLE (GDCH)

The Gas-Defeating Charging Handle blocks gas that is expelled from below the charging handle during operation.

If the gasket is no longer blocking gases, then it can be replaced with any dash 015 O-ring. For best results choose an O-ring with durometer 55A or 60A and made out of Fluoroelastomer rubber.

Cut the O-ring in one location with a pair of scissors and install as shown to the right.
